## PROJECTS

- **INTUITIVE BANANA**

    This page uses 3 different API's, Ticket Master, Audio DB and the New York Times to allow users to pull information about genre related news, featured songs and artists, local concerts and search artist information by their name. Our three separate API pulls allow us to offer a holistic user experience to music information.

- **UNCC BOOTCAMP FORUM**

    This forum allows for all students enrolled in the full-time and part-time course to have access to each other to discuss homework questions, resources, job information, and any other topics they wish to collaborate on. A sequelize database is used to store and retrieve blog posts from students and also allows them to reply to that post.
